Reference EEA No. 11510

Sirs:

I write as Chairman of the Chatham Summer Residents Advisory Committee that represents over sixty percent of Chatham homes--all owned by non-voting taxpayers. Our Committee is advisory to the Chatham Board of Selectmen, and we have advised them for the past three years of our support for sewerage all of Chatham, and our unanimous support for a reuse water system to be used for irrigation of lawns, golf courses, town properties, and the like, and for recharging the aquifer.

A reuse water system is 4.5% of the total projected cost

In many ways Chatham is a town built on water, and our most important water is the aquifer that must be protected at all costs and in every manner possible.

Respectfully

Donald Edge
